FileMaker Server 19.5.4 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your **Electronic Software Download (ESD)** page. Or contact our Sales team at: [sales@winsoft-international.com](mailto:sales@winsoft-international.com)

### New features and enhancements

- This release includes in-product notifications which allow us to share our latest news with you directly in FileMaker Pro and FileMaker Server (English only).

### Addressed issues

- FileMaker Pro and FileMaker Server can now open files that could not be reopened after modifying the settings in the File Options dialog box with a limited access account.

### Known issues

- Ubuntu: Installation on Ubuntu 18.04 incorrectly references HTTP Nginx Server. The only web server supported on Ubuntu 18.04 is Apache.

### APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
