

## Clarif FileMaker Server 20.2.1 Release Notes

October 2023

This software updates FileMaker Server 2023 to version 2023 (20.2.1), adds new features and enhancements, and addresses issues.

FileMaker Server 20.2.1 is available as a full installer, which can also upgrade or update an existing installation.

**Download the installer from your Electronic Software Download (ESD) page.** Or contact our Sales team at: [sales@winsoft-international.com](mailto:sales@winsoft-international.com)

### New features and enhancements

- The FileMaker Admin API and FileMaker Server Admin Console now use the server's local time zone instead of UTC.

### Addressed issues

- Incorrect credentials were passed to external data sources when the Perform Script on Server script step was run.
- Multiple FileMaker WebDirect issues were addressed:
  - Layouts froze and the blue loading circle appeared intermittently.
  - Keys were incorrectly and continuously repeated during field data entry.
  - Entered text disappeared after being typed before record commit.
  - Changes did not revert after editing data in a summary field.

### APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
