Claris FileMaker Server 21.1.3 Release Notes

March 2025

This software updates FileMaker Server to version 2024 (21.1.3), adds new features and enhancements, and addresses issues.

FileMaker Server 21.1.3 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

Addressed issues
Stability and performance

- Over time the FileMaker Script Engine (FMSE) process caused memory to fill up and performance to slow.
- The Web Publishing Engine (WPE) process failed to restart after updating FileMaker Server.
- FileMaker Server stopped responding after performing a backup or running a scheduled script.
- FileMaker Server stopped responding during heavy traffic.
- FileMaker WebDirect: When text was pasted into a field in the latest versions of Google Chrome or Microsoft Edge, the last character of the pasted text was incorrectly deleted when you clicked somewhere outside of the field.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
