

Clarif FileMaker Server 21.1.4 Release Notes

April 2024

This software updates FileMaker Server 2024 to version 2024 (21.1.4), adds new features and enhancements, and addresses issues.

FileMaker Server 21.1.4 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

Addressed issues

- When cached in a certain access order, field definitions were incorrectly applied for users who subsequently read from the cache. Users with limited access privileges could then experience empty related fields, value lists, indexes, and an error code 9 ("Insufficient privileges") when clicking in these fields. Claris has now reproduced this issue and verified that it no longer occurs in this release.
- Windows: The number of simultaneous FileMaker Script Engine sessions could not exceed the number of CPU cores allocated to the Windows environment. Now, the maximum number of simultaneous sessions is 50.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
