Claris FileMaker Server 21.1.6 Release Notes

September 2025

This software updates FileMaker Server 2024 to version 2024 (21.1.6), adds new features and enhancements, and addresses issues.

FileMaker Server 21.1.6 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

New features and enhancements

- A script for updating Ubuntu's Apache and Nginx web servers has been added.

Addressed issues

- Ubuntu: When using external authentication with Active Directory, account privilege set priority was determined by alphabetical ordering instead of the priority order configured in FileMaker Pro. Users belonging to multiple external groups could receive incorrect privilege levels regardless of the intended security hierarchy.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
