

Claris FileMaker Server 22.0.2 Release Notes

September 2025

This software updates FileMaker Server 2025 (22.0.2), adds new features and enhancements, and addresses issues.

FileMaker Server 22.0.2 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

New features and enhancements

Web servers

- A script for updating Ubuntu's Apache and Nginx web servers has been added.

Addressed issues

FileMaker WebDirect

- Charts didn't display properly, appearing as blank areas instead of rendering the chart content.

Admin Console

- Clicking the **Go to Adoptium** link in Admin Console's Connectors panel resulted in a 404 error page instead of opening the OpenJDK 17 download page.

SSL certificates

- Let's Encrypt certificate requests and renewals through FileMaker Admin API failed with error code 8557 and returned a 500 Internal Server Error.

Privacy

- macOS, Ubuntu: Database information was still being logged in the `fm_LLMOS_Debug.log` file even when debug mode was disabled, potentially exposing sensitive information.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
