

AI-powered features in Claris FileMaker

Claris FileMaker 2025 introduces a new generation of AI-driven capabilities that transform how users search, analyze, and interact with their data.

From natural-language search to predictive insights and automated content creation, these intelligent tools streamline workflows, boost accuracy, and unlock more value from every record.

Intelligent data interaction

Perform semantic search

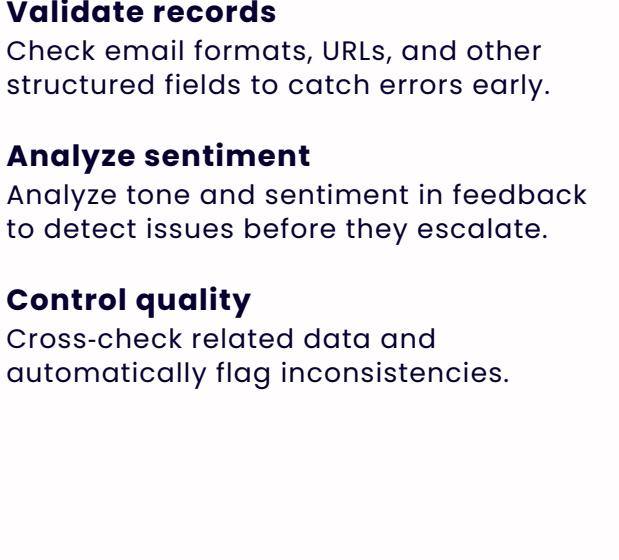

Find related records based on meaning and context, not just keywords.

Find naturally

Search your data using everyday language instead of complex criteria.

Auto-classify content

Tag and categorize images and documents automatically based on their content.

Smarter text & interaction

Summarize & rewrite

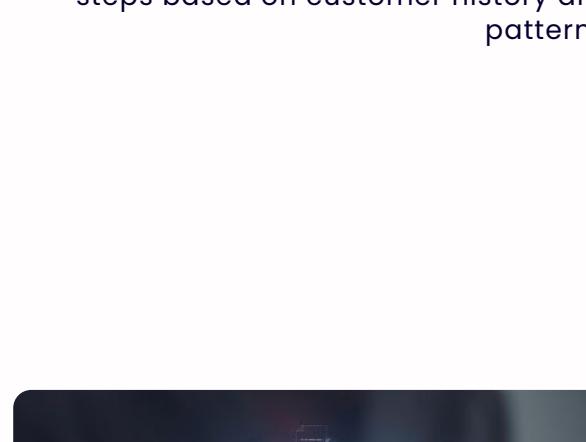

Turn rough notes into polished, professional content.

Generate content

Draft emails, descriptions, and customer replies automatically.

Translate content

Break down communication barriers with on-the-fly translation.

Data quality & validation

Validate records

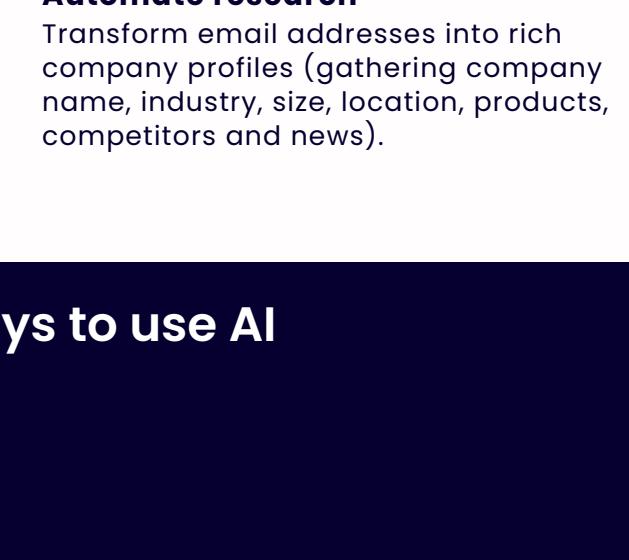

Check email formats, URLs, and other structured fields to catch errors early.

Analyze sentiment

Analyze tone and sentiment in feedback to detect issues before they escalate.

Control quality

Cross-check related data and automatically flag inconsistencies.

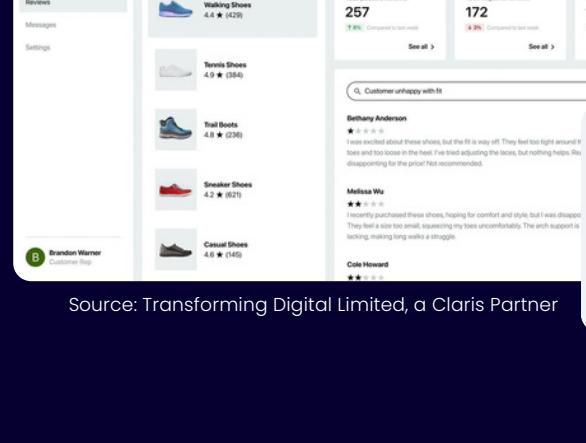

Predictive power

Generate insights

Detect outliers, trends, and patterns across large datasets.

Suggest actions

Recommend logical follow-ups or next steps based on customer history and patterns.

Smarter development tools

Generate sample data

Create realistic test data instantly without exposing real data.

Perform natural-language SQL queries

Build complex SQL queries simply by describing what you need.

Automate research

Transform email addresses into rich company profiles (gathering company name, industry, size, location, products, competitors and news).

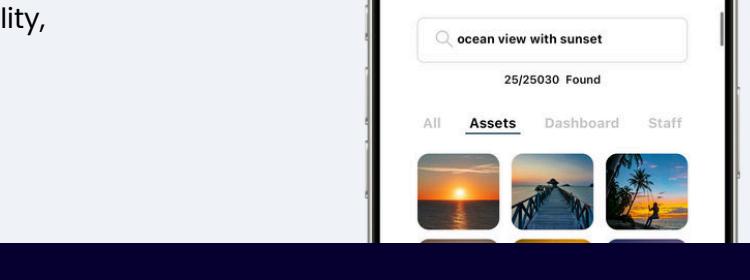

Stop customer issues before they escalate

AI automatically categorizes reviews by sentiment and priority, so your team responds to what matters most, instantly.

Try FileMaker for free

Speed up plant inspections with confidence

AI categorizes plants from photos and delivers instant accept/reject recommendations—right on your iPhone or iPad.
