Claris FileMaker Server 22.0.5 Release Notes

February 2026

This software updates FileMaker Server 2025 (22.0.5), adds new features and enhancements, and addresses issues.

FileMaker Server 22.0.5 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

Addressed issues

Installation

- macOS: After upgrading FileMaker Server from version 21 to 22, the Web Publishing Engine on secondary machines in a multi-machine deployment stopped running and couldn't be restarted without reconfiguring the connection.

Security

- Apache Tomcat has been upgraded to version 10.1.47 to address CVE-2025-31650, CVE-2025-55752, CVE-2025-55754, and CVE-2025-61795.

FileMaker WebDirect

- In FileMaker WebDirect, entering text using Japanese language input didn't commit the entered text, causing the text to be lost when changing layouts, creating new records, or performing other actions.

Generate PDF

- Text using the Courier New font displayed incorrect character spacing and kerning when saving records as PDF files.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
