

Claris FileMaker Server 22.0.6 Release Notes

March 2026

This software updates FileMaker Server 2025 (22.0.6), adds new features and enhancements, and addresses issues.

FileMaker Server 22.0.6 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

Addressed issues

- A path traversal vulnerability in FileMaker Server allowed remote code execution by specifying a system script schedule with an executable path that navigated outside the permitted Scripts folder. System script schedules are now restricted to executables within the /FileMaker Server/Data/Scripts folder. Additionally, system script parameters may no longer include ; & | ` < > \$ % * ? or newline characters.
- JWT tokens were stored in localStorage when signing into Admin Console and are now stored only in sessionStorage.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
