

Clarif FileMaker Pro 22.0.6 Release Notes

March 2026

This software updates FileMaker Pro to version 2025 (22.0.6) and addresses issues. If you are unable to successfully update to FileMaker Pro 2025 (22.0.6), search the Knowledge Base for installation information.

Addressed issues

- macOS: In macOS Tahoe, FileMaker Pro quit unexpectedly when you held the pointer over a text box after receiving a one-time verification code from SMS or Mail. As a workaround, automatic verification code suggestions in FileMaker Pro are now disabled for all macOS versions, while password autofill continues to function normally. Apple and Clarif are working closely together to address the root cause of this issue so that automatic verification code suggestions can be restored in a subsequent version of FileMaker Pro.
- When opening a hosted file over a connection with HTTPS tunneling enabled, container field data took significantly longer to load than expected.

Platform	Product	Updates Version	Download	Languages
Windows	FileMaker Pro 2025	22.0.6	FileMaker Pro 22.0.6 Updater (setup.exe) 	English Czech Polish Turkish Russian
macOS	FileMaker Pro 2025	22.0.6	FileMaker Pro 22.0.6 Updater 	

APIs, technologies, or features to be deprecated

As FileMaker Pro evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
