

Claris FileMaker Pro 26.0.2 Release Notes

September 2026

This software updates FileMaker Pro to version 26 (26.0.2) and addresses issues. If you are unable to successfully update to FileMaker Pro 26, search the Knowledge Base for installation information.

New features and enhancements

Inspector pane option (macOS)

- By default, the Inspector pane now uses the standard Inspector. To switch to the adaptive Inspector introduced in version 26.0.1, select the new **Use adaptive Inspector pane** option in the Schema tab of the Settings dialog. See Using the Inspector to format objects.

Security updates

- Windows: When you sign out of a Claris ID account, an additional dialog is no longer displayed, simplifying the sign-out process.
- The following third-party libraries have been updated to the indicated versions:
 - libcurl 8.20.0
 - OpenSSL 3.5.7 LTS

Addressed issues

Artificial intelligence script steps

- The Insert Image Captions in Found Set script step didn't insert a caption when only one record in the found set required one.
- Using the Generate Response from Model script step with LM Studio when the **Stream** option was turned off sometimes generated a duplicate response.
- The Insert Embedding in Found Set script step returned an "Invalid JSON payload received" error when using a Google embedding model and specifying the **Parameters** option.
- When adding data, the Perform RAG Action script step sometimes returned no response and no error, even when the underlying request failed.
- After copying and pasting a Perform RAG Action script step, the **Response Target** setting was lost. This occurred if the action was to add data and the **RAG Data** option was one of the asynchronous settings.
- After copying and pasting a Configure Prompt Template script step, if the **Model Provider** option was set to Google, it was changed to OpenAI.

Adaptive Inspector pane (macOS)

- After selecting a layout part, the line and corner radius attributes didn't appear in the adaptive Inspector pane, even though they appeared in the Inspector window.
- The **Remove from group** button didn't appear when selecting a single object that belonged to a group. It was available only when selecting two or more objects in a group.

General

- Windows: FileMaker Pro stopped responding after you navigated to a layout whose base table was an Oracle database table connected as an external SQL data source, then signed in to the data source, regardless of whether the credentials were correct.
- If a client forced FileMaker Pro to quit or disconnected from FileMaker WebDirect while the Delete Account script step was running, the affected file could become locked and fail to open, security modifications would display a message indicating another user was modifying the items, and file verification would fail with error 808.

Platform	Product	Updates Version	Download	Languages
Windows	FileMaker Pro 26	26.0.2		English Czech Polish Turkish Russian
macOS	FileMaker Pro 26	26.0.2		

APIs, technologies, or features to be deprecated

As FileMaker Pro evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
